Problem 1

Write a program that stores value 121 and 260 into two integer variables. Then display the sum of the two variables as

The sum of 121 and 260 is 381.

Problem 2

Write a program that declares the following:

1. a String variable named name

2. an int variable named age

3. a double variable named annualPay

Store your age, name, and desired annual income as literals in these variables. The program should display these values on the screen in a manner similar to the following:

My name is Paul Cao, my age is 35 and I hope to earn $100.0 per year.
